Summary

With a BAsC in Computer Software Engineering from Islamic Azad University and multiple certifications from MikroTikSA, Fortinet, SEMATEC, and others, I have developed a strong foundation in cybersecurity, network administration, and network security. I am currently a Security Professional at Cyber Soha, where I consult and do all IT work and network security and sell equipment to companies and government organizations.

Previously, I worked as an SoC architect at Razhman Algorithm Hoppad and as the head of network security at Alborz Province Computer Trade Union Organization. In these roles, I monitored, implemented, and improved the security measures and checklists for various IT systems and networks, and fixed known CVEs for the agency. I am passionate about increasing the security and efficiency of IT systems and networks and can bring different perspectives and experiences to the team based on my work with different customers and departments.

Experience

Security Professional
